

L^AT_EX Template

Atanas Atanasov

1 Introduction

This is a simple template useful for starting LaTeX documents. All package includes and additional commands are defined in `customizations.tex`. Reading through it will help you write more efficiently. A lot of the custom commands are aimed at mathematical writing, but they can be easily changed to suit different needs. Please make sure to copy `customizations.tex` along with any documents derived from this template.
